

# Sustainable Schoolwear

## Who are we?

Sustainable Schoolwear is a small, award winning Australian business that is leading the way in producing environmentally friendly uniforms and managing school uniform shop services.

We do things differently, and are committed to creating sustainable schoolwear options that don't cost the earth and are made with care for the people and products used in the process.

Did you know that textile production is considered the second largest polluter globally (WWF).

Our difference is that we use fabrics grown without pesticides and chemicals, reduce landfill by using polyester made from recycled bottles and only partner with manufacturers that pay a fair wage.

We care about better management of our resources and our waste.

Most traditional polyester used in uniforms is a petroleum based material - a non-renewable resource that can take 200 years to decompose.

## Our Mission

*Our mission is to offer a range of schoolwear that's comfortable, durable, affordable, grown sustainably and made ethically- a range of schoolwear that's healthier for our kids and the planet.*

## Your experience

At this moment in time, not all of your school uniform needs can be met by an environmentally friendly option.

However, we will partner with the P&C to progressively review the materials currently being used and introduce more sustainable options that are ethical, eco friendly and comfortable. We delivered Australia's first GOTS certified organic cotton and recycled polyester schools basics range three years ago.

In addition we believe in creating, maintaining and developing environmentally friendly processes, and providing a sustainable textiles hub for education and inspiration that will broaden HHHS sustainability impact.

We look forward to partnering with the Hunters Hill High School community to create sustainable schoolwear.

I look forward to meeting you.
